What's new with MultiLine for Intune?

Improvements to end-user activation flow

When end-users install MultiLine apps, they must complete the activation process before they begin using them. The new process is far more streamlined, reducing the time and effort required by end-users to activate the app. It will not require scanning a QR code, or entering the username and password credentials. Optionally, at customer request, retrieving an OTP PIN code can be disabled.

WhatsApp icon fix (v. 3.6.2)

The WhatsApp icon was displayed in contact cards for users who did not have WhatsApp enabled. This has been fixed.

Intune iOS SDK Update (v. 3.6.2)

We updated to the Intune iOS SDK (17.2.0) for Multiline for Intune app.

Country code fix (v. 3.6.3)

Some users noticed that an additional country code was being incorrectly prepended when sending a message to an international destination. This has been fixed.

Intune iOS SDK Update (v. 3.6.4)

We updated to the Intune iOS SDK (17.4.0) for Multiline for Intune app.

Performance and reliability enhancements

Movius for BlackBerry iOS v. 3.06.02, Movius MultiLine iOS v. 3.06.02, MultiLine for Intune iOS v. 3.06.05

Movius uses SIP ping requests to detect connectivity status from the MultiLine application to the Movius Platform. We are moving the handling of these SIP pings from the firewall to the Session Border Controller (SBC). We're doing this because the SBC is better able to handle this traffic. There will be no detectable impact for users.

Label configuration option for Home 2

Movius for BlackBerry iOS v. 3.06.03 and Movius for BlackBerry Android v. 3.06.02

The Movius for BlackBerry application offers fields for categorizing phone numbers, such as Home, Home 2, Work, Work 2, Mobile, etc. Now, MultiLine admins can configure the "Home 2" contact label to display as "MultiLine" instead, so that users will more easily be able to identify their contact's MultiLine number.

What's new?

- **Arya – Movius AI driven Call Quality Feedback Collection Process**
 - MultiLine users are now able to rate the quality of their calls by giving a thumbs up or thumbs down.
 - User feedback will be used by Movius to identify opportunities to further improve the service using our analytics and AI technology.
 - This feedback method will eliminate the need for help tickets and manual sending of logs when users experience poor call quality.
 - Admins will receive a daily report by email detailing the data collected. If tickets are opened related to user feedback, progress on these will be tracked in the daily report.
 - The report includes data such as the quantity of data and minutes calls that were rated poorly, the phone models and carriers used by end users, as well as many other useful statistics.
 - For "thumbs down" reports Movius will create trouble tickets and communicate the RCA for the call failure in the case. Additionally for admins that have secure FTP servers, a CSV report can be uploaded which will allow the admin to consume and display the data the way they want to.

- PIN User experience update:
 - During activation of MultiLine apps, users now have the option to receive the PIN by IVR callback. This ensures that in the case the user is unable to get their PIN by SMS message, the user can complete activation by receiving the PIN by phone call.
